

□

IBM Case Manager: Configure Security (v5.3.2)
Information

Length: 8.0 Hours
Ref: F2920G □
Delivery method: Classroom
Price: AUD

Overview

In this course you will configure security for IBM Case Manager environments and solutions. You will work with project areas, control access to cases, and create security configurations. You will deploy a solution in a new environment and use a security configuration package file to manage solution security. You will customize security settings with a custom privilege definition and use security proxies to automate security changes.

Public

This course is for system administrators who maintain IBM Case Manager environments and for solution architects who must plan security requirements for their solutions.

Prerequisites

- Knowledge of Case Manager concepts, such as case management, case, solution, task.
- Ability to build, validate, deploy, and test solutions.
- or Build an IBM Case Manager Solution V5.3.2 (classroom)(F2910G)
- or Build an IBM Case Manager SolutionV5.3.2 (self-paced)(F2919G)

Topics

Unit 1 Overview of security deployment

- Describe the process for deploying a security configuration.
- Identify the security goals for each environment type

Unit 2 Work with project areas

- Create a project area
- Add users to a project area

Unit 3 Manage access to cases

- Describe object security in a target object store
- Create roles for a case

- Create an in-basket for all assigned work
- Assign users to case teams

Unit 4 Create a security configuration

- Create a security configuration
- Edit security configuration permissions
- Apply a security configuration to a solution

Unit 5 Configure target object store security

- Organize users and groups for target object store access

Unit 6 Configure deployed solution security

- Package and export a solution
- Import a solution to a new environment
- Apply a solution configuration

Unit 7 Customize a privilege definition

- Create a custom privilege definition
- Apply a custom privilege definition to a security configuration

Unit 8 Use security proxies

- Describe a security proxy scenario
- Use a security proxy to modify permissions on a case
- Describe how to transfer a solution with security proxies to a new environment

Unit A Automate case security changes

- Describe a scenario for automating security changes
- Use a FileNet workflow to change permissions on a case by using a security proxy

Unit B Additional security configurations

- Analyze scenarios that require specific security customizations
