

IBM InfoSphere Information Governance Catalog II - Building the Governance Catalog V11.3
Information

Length: 1.5 Days
Ref: KM613G-X
Delivery method: Classroom
Price: AUD

Overview

The Information Governance Catalog is a new product within the Information Server suite of products. It replaces two products in earlier versions of Information Server: Business Glossary and Metadata Workbench. The new Information Governance Catalog contains and enhances all the functionality that these earlier products contained and adds additional functionality as well as an enhanced user interface.

Information Governance Catalog I focuses on the functionality previously contained in Metadata Workbench. Information Governance Catalog II focuses on the functionality previously contained in Business Glossary. In Information Governance Catalog II you will learn how Information Governance Catalog is used to govern your information assets through the development of a governance catalog of categories and terms that document your information assets and governance policies and rules that implement the high-level strategy and objectives of your governance program.

Public

This is a basic course for those who will be using Information Governance Catalog to develop and implement their information governance strategy.

Prerequisites

You should have basic knowledge of the Windows operating system. Familiarity with Information Server products is desirable but not required.
