

IBM Access Manager Platform Foundations
Information

Length:	24.0 Hours
Ref:	TW107G
Delivery method:	ClassroomInstructor Led Online
Price:	AUD

Overview

IBM Access Manager is a highly scalable and configurable access management solution. It simplifies and secures your user experience with single sign-on across applications and protects critical assets using strong multi-factor authentication and risk-based access.†You can use IBM Access Manager to adopt secure web, mobile, and cloud technologies and simplify access management for your employees and consumers. Using the skill taught in this course, you will be able to configure authentication and authorization mechanisms, implement policy access control, and set up reverse proxy junctions to process web requests.

Public

This course is designed for system administrators and implementors interested in learning IBM Access Manager.

Prerequisites

Before taking this course, make sure that you have the following skills:

- Familiarity with LDAP, TCP/IP and HTTP
- Familiarity with the Linux command-line
- Basic knowledge of JavaScript
- Working knowledge of security concepts, including SSL, authentication, and authorization

Topics

- Unit 1: Introduction to IBM Access Manager
- Unit 2: Architecture and installation
- Unit 3: Managing users, groups, and domains
- Unit 4: Reverse proxy concepts
- Unit 5: Policy based access control
- Unit 6: Configuring junctions for back-end resources

Unit 7: Authentication framework and methods
Unit 8: Logging, auditing, and tracing
