Jazz Team Server V4.0 Administration
Information

Length: 2.0 Days
Ref: RS860G-X
Delivery method: Classroom
Price: EUR

Overview

This course teaches system administrators or development team leaders how to install, configure, and maintain an IBM® Jazz™ Team Server environment. The course includes these topics:

- Planning a deployment topology and software infrastructure for the applications of the Rational® solution for Collaborative Lifecycle Management (CLM)
- Installing and configuring the required software packages
- Managing users and licenses
- Maintaining and troubleshooting the Jazz Team Server
- Implementing upgrades to the system

The Rational solution for CLM provides a fully integrated environment that includes IBM Rational Requirements Composer for requirements definition and management, IBM Rational Team Concert™ for change and configuration management, and IBM Rational Quality Manager for quality management.

Public

This advanced course is for:

- System administrators
- Development team leaders
