IBM ProtecTIER Sizing and Planning Workshop Information

Length: 1.0 Day
__Ref: SS930G-X[□]
Delivery method: Classroom
Price: EUR

Overview

This one day workshop focuses on sizing and planning fot IBM ProtecTIER.

Public

The intermediate workshop is for IBMers or IBM business partners.

Prerequisites

You should have:

- Good understanding, ideally working knowledge of concepts and processes to deploy a ProtecTIER deduplication solution

Objective

The workshop is intended to provide participants with the necessary insight to properly perform accurate sizing's for ProtecTIER environments. This will subsequently help to avoid future crits-sits due to miscalculated assessments.

Topics

You will get the chance to work with the capacity planner and the performance planner and gain some valuable experience on how to use the tools in the most effective way. Alongside the presentations, there will be room for open discussions about past field experience. Fundamental topics and basic skills around deduplication and ProtecTIER will NOT be covered. Please refer to SS92G for overall product education.
