Advanced Impromptu Reporting
Information

Length: 1.0 Day
Ref: Z3304G-X
Delivery method: Classroom
Price: EUR

Overview

Series 7 Versions 3 and 4 Advanced Impromptu Reporting is a one-day instructor-led course that focuses on advanced reporting techniques for report builders, analysts, and administrators. Students learn techniques to create high-performance, real-world business reports. These skills extend well beyond those developed in Impromptu Report Building. Through hands-on demonstrations and workshops, and an understanding of how Impromptu works you learn to develop systems of reports. You incorporate optimizing concepts like client/server balancing as well as distribution practices such as preparing for publishing to the Web. Because the requirements of each Impromptu environment are unique, this course emphasizes general concepts that can be tailored to your specific environment.

****This course available in both English and French.**

Public
