Dimensions Survey Analysis II - ILT
Information

Length: 1.0 Day
__Ref: 0M324G-X
Delivery method: Classroom
Price: EUR

Overview

This is an extension of the basic or introductory Dimensions Survey Analysis course. In that course, you learned how to use the Reporter/Desktop Reporter product to load datasets, create table constructs, apply rules and export aggregated tables to an Office Application. The intended audience for this new course are those people that are proficient with Reporter/Desktop Reporter but need to take the product beyond its initial application to solve business problems.

Public

Please refer to course overview for description information.

Prerequisites

You should be familiar with Reporter/Desktop Reporter. A familiarity with Dimensions Scripting is useful but not required.

Objective

Please refer to course overview for description information.

Topics

- Syntax Based Variable Creation
- Syntax Based Variable Modification
- Merging Case Data with Desktop Reporter
- Creating Custom Charts
- Creating Style Sheets for Tables
