IBM Case Manager 5.1 - Installation Information

Length: 2.0 Days
Ref: F186G-X
Delivery method: Classroom
Price: EUR

Overview

This course is for those whose job duties include responsibility for planning and installing IBM Case Manager software.

You will install a fully functioning IBM Case Manager 5.1 distributed system on Linux. The skills practiced during this course follow the documented requirements to interactively install the software. You will learn how to use the IBM Information Center to plan the install as well as perform the installation steps. Additionally, other supported software configurations will be described and the IBM Information Center locations for this information will be reviewed. On the final day of class, you will be required to perform a successful installation of the IBM Case Manager software, without instructor assistance. (Platform: Linux, DB2, Tivoli Directory Services, and WebSphere Application Server).

Public

This intermediate course is for technical professionals who are required to install IBM Case Manager.

Prerequisites

You should complete:

- *IBM FileNet P8 Platform 5.1: Installation (F1900)*
