IBM Security Access Manager Advanced Topics Information

Length:	0.5 Day
Ref:	TW122G-X
Delivery method:	ClassroomInstructor Led Online
Price:	EUR

Overview

This modular instructor-led training covers advanced configuration topics for IBM Security Access Manager for Web and IBM Security Access Manager for Mobile. You can deliver the modules in this course in any sequence and bundle them with other course material to create a custom course.

Public

This advanced course is for IBM Security Access Manager administrators.

Prerequisites

You should have:

- Basic IBM Security Access Manager for Web administration
- Basic IBM Security Access Manager for Mobile administration
- Unix administration

You should also have taken:

- *IBM Security Access Manager for Mobile (TW115G)*
- *IBM Security Access Manager for Web (TW106G)*

or have the equivalent experience.

Objective

- Describe the high-level architecture of IBM Security Access Manager
- Configure OAuth support to allow third-party access to protected resources
- Implement payload extraction from a mobile application to use in authorization decisions

Topics

- Course and lab overview

- Module 1: Architecture and setup overview
- Module 2: Enabling OAuth support
- Module 3: Implementing payload extraction
