Essentials of IBM UrbanCode Deploy 6.2 – DevOps  
Information

<b>Length:</b>	1.0 Day
<b>Ref:</b>	CQ400G-X
<b>Delivery method:</b>	ClassroomInstructor Led Online
<b>Price:</b>	EUR

Overview

This is a basic course for new users of IBM UrbanCode Deploy, such as configurators, users, producers, and administrators. It teaches the core concepts of UrbanCode Deploy for DevOps use.

The course teaches you how to use IBM UrbanCode Deploy to standardize and simplify the process of deploying software components to each environment in your development cycle. You learn how to configure IBM UrbanCode Deploy for the deployment of a pet store application to two different environments. You create resources and versioned components, configure the environments, and deploy the application. You also create teams and roles and learn the fundamentals of security.

Hands-on labs use IBM UrbanCode Deploy in a cloud environment and cover resources, components, applications, deployment, and security.

Public

This course is designed for new users of IBM UrbanCode Deploy, including configurators, users, producers, and administrators.

Prerequisites

Before taking this course, you should have a basic understanding of client-server architecture and multitier application models.

Objective

After completing this course, you should be able to:

- Describe problems that IBM UrbanCode Deploy helps to solve

- Explain the workflow for a basic project
- Explore the user-interface navigation
- Organize and access resources
- Orchestrate deployments to various environments
- Set up the security model
- Troubleshoot deployment problems (administrators only)
- Make use of the extended product functionality (administrators only)

## Topics

- Product overview
- Resources
- Components
- Applications
- Deployments
- Security
