

□

IBM Sterling Order Management (V9.5) Configuring Item and Pricing Information

Length:	16.0 Hours
__Ref:	6F92G □
Delivery method:	ClassroomInstructor Led Online
Price:	EUR

Overview

This course provides students with thorough conceptual and procedural information on item and pricing administration. The course teaches students to perform item, pricing, and other related configurations using the IBM® Sterling Business Center application. This course is primarily designed for developers and implementers.

The course begins with an overview of the item and pricing concepts along with an introduction to the Sterling Business Center application. The course thereafter provides deep dives into each of these topics - catalog and item administration, customer management, resource pool management, pricing administration, and system configurations.

Through a combination of procedural information and exercises, students can learn to create catalogs, items, pricing rules, and so on. Each unit has a checkpoint for the students to reinforce the topics that were covered.

Public

This course is designed to train developers and implementers.

Prerequisites

Before taking this course, students should have completed:

6F91G – Configuring Participant Modeling, Process Modeling, and User Security (6F91G)

Topics

The following topics will be covered during this course:

- Course Overview
- Unit 1: Introduction to IBM Sterling Business Center
 - Lesson 1.1: Introduction to Item and Pricing Concepts

- Lesson 1.2: Introduction to IBM Sterling Business Center
 - Exercise 1.2.1: Navigate the Sterling Business Center
- Unit 2: Item Administration
 - Lesson 2.1: Catalog Management
