Essentials of Service Development for IBM DataPower Gateway V7.5
Information

Length:	20.0 Hours
Ref:	WE751G
Delivery method:	ClassroomInstructor Led Online
Price:	EUR

Overview

This course is also available as self-paced virtual (e-learning) course*Essentials of Service Development for IBM DataPower Gateway V7.5* (ZE751G). This option does not require any travel.

This course teaches you the essential skills that are required to configure, implement, and troubleshoot services that are developed on the IBM DataPower Gateways (IDG) with firmware version 7.5.0, regardless of use case.

The DataPower Gateways allow an enterprise to simplify, accelerate, and enhance the security capabilities of its XML and web services deployments, and extend the capabilities of its service-oriented architecture (SOA) infrastructure. The gateways also extend these capabilities into the JSON, REST, and Mobile application areas.

Through a combination of instructor-led lectures and hands-on lab exercises, you learn how to develop and debug services that are implemented on the DataPower gateways. These skills include WebGUI and Blueprint Console navigation, service type selection, basic multi-protocol gateway configuration, creating and using cryptographic objects, and configuring SSL connections. You also learn how to use various problem determination tools such as logs, monitors, and probes, and techniques for testing DataPower services and handling errors.

Hands-on exercises give you experience working directly with a DataPower Gateway. The exercises focus on skills such as creating multi-protocol gateways, working with cryptographic and SSL objects, configuring service level monitoring, troubleshooting services, handling errors in a service policy, and deploying a service from a pattern.

Public

This course is designed for integration developers who configure service policies on IBM DataPower

Gateways.

Prerequisites

Before taking this course, you should successfully complete course VW750, *Technical Introduction to IBM DataPower Gateway Appliance V7.5.0*. This free webcast is available at <https://youtu.be/yYk5Bzuie4g> or https://mediacenter.ibm.com/media/t/1_fb2tsml1. You should also be familiar with:

- Security-based concepts and protocols
- XML-related technologies such as XML schema, XPath, and XSLT
- JavaScript programming
- Web service and REST basics

Topics

Course introduction

Quick introduction to developing on DataPower

Exercise: First exposure to the DataPower developer environment

Services overview

Structure of a service

Exercise: Creating a BookingService gateway

Multi-protocol gateway service

Problem determination tools

Exercise: Enhancing the BookingService gateway

Handling errors in a service policy

Exercise: Adding error handling to a service policy

DataPower cryptographic tools and SSL setup

Exercise: Creating cryptographic objects and configuring SSL

Service level monitoring

Exercise: Implementing a service level monitor in a multi-protocol gateway

Patterns for service configuration

Exercise: Using a DataPower pattern to deploy a service

Course summary
