

IBM Tealeaf Customer Experience 9.0.1 Administration and Maintenance Workshop Information

Length: 1.0 Day
Ref: 9F27G-X
Delivery method: Classroom
Price: AUD

Overview

The Tealeaf system is comprised of several major components that house multiple databases and services. For the most part, these do not need much maintenance after installation. However, there are certain aspects that do need to be updated regularly to ensure the integrity of the resulting Tealeaf data. For these purposes and to facilitate trouble-shooting, it is essential for system administrators to be familiar with the Tealeaf components and overall structure of their installation.

Public

This intermediate workshop is recommended for Tealeaf administrators, who include the owners of the IBM Tealeaf system as well as associated Linux, Windows, and SQL administrators.

Prerequisites

You should have taken:

- IBM Tealeaf Customer Experience Fundamentals
- IBM Tealeaf Customer Experience Eventsand Reports

Objective

- Understand the IBM Tealeaf system components and data flow
- Perform system maintenance tasks
- Troubleshoot issues with the system
