BPM Project Management
Information

Length:	2.0 Days
Ref:	WB004G-X
Delivery method:	ClassroomInstructor Led Online
Price:	EUR

Overview

This course teaches best practices for business process management (BPM) project leadership and answers common questions about managing BPM projects.

In this course, you will learn how to use the process playback methodology to achieve a faster alignment between their business needs and the implemented solution, which can reduce delivery risk and increase user acceptance. You will learn how they can deliver projects faster and with greater predictability by using IBM Business Process Manager to define, implement, and measure a process without the rework that traditional technology implementations often require. You will also learn how to recognize the most frequently encountered obstacles for BPM projects, and how to mitigate the associated risks.

The course uses a collaborative learning environment, with hands-on demonstrations and exercises to reinforce concepts and check understanding. You will work together to discuss topics and perform the exercises, which provide an opportunity to practice their new project management skills.

There is no lab environment for this course. You will use their own spreadsheet software during the course to complete lab exercises.

Public

This intermediate course is for team members who develop and manage BPM implementation plans.

Prerequisites

Before taking this course, you should have basic project management knowledge. You should also successfully complete *Introducing IBM Business Process Manager*(VW902G) **or** have equivalent basic familiarity with BPM concepts.

Objective

- Describe the process lifecycle project management phases
- Use user stories during project management
- Use tools to estimate project size, time, and budget
- Use the playback methodology to manage projects
- Deploy a process and manage it to complete the process lifecycle
- Describe the BPM journey

Topics

- Course introduction
- BPM project overview
- The discover and document phase
- The plan and implement phase, part I
- The plan and implement phase, part II
- The deploy phase and the manage phase
- Project to program
- Course summary
