IBM Spectrum Protect 8.1.6 Implementation and Administration  
Information

**Length:** 40.0 Hours  
**Ref:** TS617G □  
**Delivery method:** Classroom  
**Price:** EUR

Overview

IBM Spectrum Protect 8.1.6 is a data backup and recovery solution designed to help you manage your data retention, reduce the cost of storage, and provide appropriate recovery point objectives to meet any service level agreement. IBM Spectrum Protect offers improved efficiency and flexibility using object-based data management and policy driven retention. Please note that a later version of this course, TS618G, IBM Spectrum Protect V8.1.9 - Implementation and Administration, is available.

This five day course will focus on implementation and basic administration of a IBM Spectrum Protect environment. The hands-on lab exercises are performed on a Windows 2012 environment. The course materials include examples of AIX and Linux commands, when different from Windows.

Public

Implementers and administrators who are new to IBM Spectrum Protect data management.

Prerequisites

- Ability to navigate Windows 2012
- A basic understanding of concepts regarding client/server relationships

Topics

- Unit 1 Components and concepts
